No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                         Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant (
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean seeds, a method of making or producing a soy
CC processing of soybean seeds, a method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC concessing of soybean seeds, a method of making or producing a soy
CC protein product and a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthasis of myo-inositol 1-phosphate. The
CC nucleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phytic acid content and increased
CC soybean products. This sequence represents cDMA encoding a mutant soybean
CC myo-inositol 1-phosphate synthase soyments are invention.

nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus stachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Glycine max; line 29010CP01
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2004-639957/62.

                                                                                                                                                                     crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate, where the gene confers a heritable phenotype as mentioned above), and making or producing a soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The mucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a mutant myo-inceiral inceiral inceiral
                                                                                                                                 inositol 1-phosphate synthase.

                                                                                                                                                                                Alignment
                                                                                                                                                                                                                                   The invention relates to a nucleic acid fragment encoding a soybean myo-
ci inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
cynthase having a decreased capacity for the synthesis of myo-inositol 1-
cynosphate. The invention also relates to a chimeric gene operably linked
cynosphate. The invention also relates to a chimeric gene operably linked
cynosphate in a decrease in expression of an endogenous or native gene
cynosphate in a decrease in expression of an endogenous or native gene
cynosphate synthase, a soybean plant
cynosphate chimeric gene, a method of making the soybean plant, a
cynosphate synthase having
cynotein product and a method of using a soybean plant homozygous for at
cynosphate synthase having
cynotein product and a method of using a soybean plant homozygous for at
cynosphate synthase having
cynosphate capacity for the synthesis of myo-inositol 1-phosphate ynthase having
cynosphate ard finose, stachyose and phytic acid content and increased
cynobean products. This sequence represents cDNA encoding a wild type
cynosphate in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           08-APR-1997;

CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean plant, a soy protein product derived from the
CC protessing of soybean seeds, a method of finance of producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate with
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1533

                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid fragment encoding a CC soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-cc phosphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the CC uncleic acid encoding soybean myo-inositol 1-phosphate synthase, its CC complement, subfragment or the complement of the subfragment, operably CC linked to suitable regulatory sequences, where expression or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC greater than 200 micromol/g, and a seed sucrose content of stide on the plant, making a soybean plant with the heritable phenotype (comprising crossing LR3) or the plant comprising the chimeric gene with CC an elite soybean plant and selecting a progeny plant of the cross of soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds content myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate, where the gene encoding a coybean protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a mentioned above), and making or producing a feritable phenotype as mentioned above). The nucleic acid is useful for caltering raffinose saccharide, sucrose, phytic acid and inorganic collisions and the plants (and other lenguas) can lead to flatinance. CC olioosacharides in soy plants (and other lenguas) can lead to flatinance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                               oligosaccharides in soy plants (and other legumes) can lead when consumed by humans. The present sequence encodes a wild
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-APR-1997;

phosphate synthase, useful for altering raffinose saccharide, phytic acid and inorganic phosphate content of soybean seeds. sucrose,

8; SEQ ID NO 13; 34pp; English.

CC soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase for myo-inositol 1-phosphate synthase for myo-cc inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably clinked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype with an elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above, seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a company protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a company protein product derived from seeds of a soybean sentioned above, and making or producing a company protein product derived from seeds of a soybean sentioned above, where the gene confers a company protein product derived from seeds of a soybean plant with the negene confers a confers as mentioned above. The nucleic acid is useful for company and the presence of high concentration of raffinose confers and the presence of high concentration of raffinose confers and consumed by humans. The presence of high concentration of flatulence when consumed by humans. The present sequence encodes a wild-type myonogened by humans. The present sequence encodes a wild-type myonogened by humans. inositol 1-phosphate synthase. invention relates to an isolated nucleic acid fragment encoding <u>၂</u> ရ

Example 8; SEQ 밁 ö 9; 48pp; English.

The invention relates to a nucleic acid fragment encoding a soybean myoCC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate

CC synthase having a decreased capacity for the synthesis of myo-inositol 1CC phosphate. The invention also relates to a chimeric gene operably linked

CC constable regulatory sequences, where expression of the chimeric gene

CC results in a decrease in expression of an endogenous or native gene

CC results in a decrease in expression of an endogenous or native gene

CC comprising a soybean myo-inositol 1-phosphate synthase, a soybean plant

CC comprising the chimeric gene, a method of making the soybean plant, a

CC seed of the soybean seeds, a method of making or producing a soy

CC processing of soybean seeds, a method of making or producing a soy

CC protein product and a method of using a soybean plant homozygous for at

Cleast one gene encoding a mutant myo-inositol 1-phosphate synthase having

CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The

CC concreased capacity for the synthesis of myo-inositol 1-phosphate. The

CC decreased raffinose, stachyose and phytic acid content and increased

CC concreased capacity for the synthesis of myo-inositol 1-phosphate. The and inorganic phosphate

Also included are a chimeric gene (comprising the complement, subfragment or the complement of the subfragment, operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, its comprising the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, as ed content of raffinose plus trachyose of less than 17 micromol/g, and a seed content of raffinose plus (comprising crossing LR33 or the plant with the heritable phenotype (comprising crossing LR33 or the plant with the heritable phenotype (comprising step that has a heritable phenotype as mentioned above), seeds of soybean plant and selecting a progeny plant of the cross of corossing step that has a heritable phenotype as mentioned above), seeds from seeds of a soybean plant (homozygous for one or more gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate, where the gene confers a copbean protein product derived from seeds of a soybean plant with call a soybean plant with comprising call and inorganic content of soybean pants (and other legenco can lead to flatulence content of soybean seeds thus leading to valuable and useful composphate by humans. The present sequence encodes a wild-type myo-inositol 1-phosphate synthase.
                                                                                                                                                                                                                                                                                                                                                                                     Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1533
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2004-639957/62.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 8; SEQ ID NO 9; 34pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             07-APR-1998;
